

Giving Shape to Ideas

Inline Digital Foiling Solution

**METEOR Unlimited Colors Se+**

**FIRST-PASS FOILING**

- Embellishment of print jobs with the original foil color with a combination of toner and foil adhesion
- Highlight areas like logos, shapes, text and lines
- Gold or silver foil to increase the values of print jobs

**SECOND-PASS TONER**

- First-pass foiling can be overprinted with CMYK toner to create an unlimited range of metallic colors
- Brilliant light-reflecting qualities of gold and silver foil

## Focus on...

**Based on the original MGI iFOIL award-winning technology**, the iFOIL T is a breakthrough innovative digital toner foiling solution for the postpress print enhancement market.

MGI Meteor DP8700 Se+ can be fully integrated with the iFOIL T station to create a Meteor Unlimited Colors inline printing and foiling solution. Print Service Providers (PSPs) are now able to produce output with a virtually unlimited number of colors via the blending of CMYK toner and the reflective qualities of foil film – including a rainbow spectrum of hues with metallic, glitter and holographic effects.

The Meteor Unlimited Colors system uses a 100% digital production process. This unique integrated printing press and postpress foiling system eliminates the cost and need

for die-making, tooling and traditional makeready setup times and waste. A wide variety of standard market foils – and colors, patterns and designs – can be used to create brilliant (and highly profitable) special effects in a single pass. Since Konica Minolta does not impose click charges on Meteor presses, multiple passes can be cost-effectively used to create truly remarkable toner-over-foil blends of color and light on a diverse range of substrates – including uncoated and coated paper, laminated surfaces, plastics and many other synthetic materials. The system can use up to two different foils in a single pass.

## ...Unlimited Colors!

The **iFOIL T module connects inline with the MGI Meteor DP8700 Se+**. This digital enhancement option allows printers to generate lucrative, high-margin output, expand their service portfolios and strengthen their client relationships.

### First Pass Foiling

Printing jobs can be embellished with the original foil color via a fusion of toner & foil adhesion to the substrate surface. Application examples include: logos, shapes, text, lines and highlights. The ability to add elements like gold & silver to digitally printed output dramatically increases the value of the material to the customer.

### Second Pass Toner

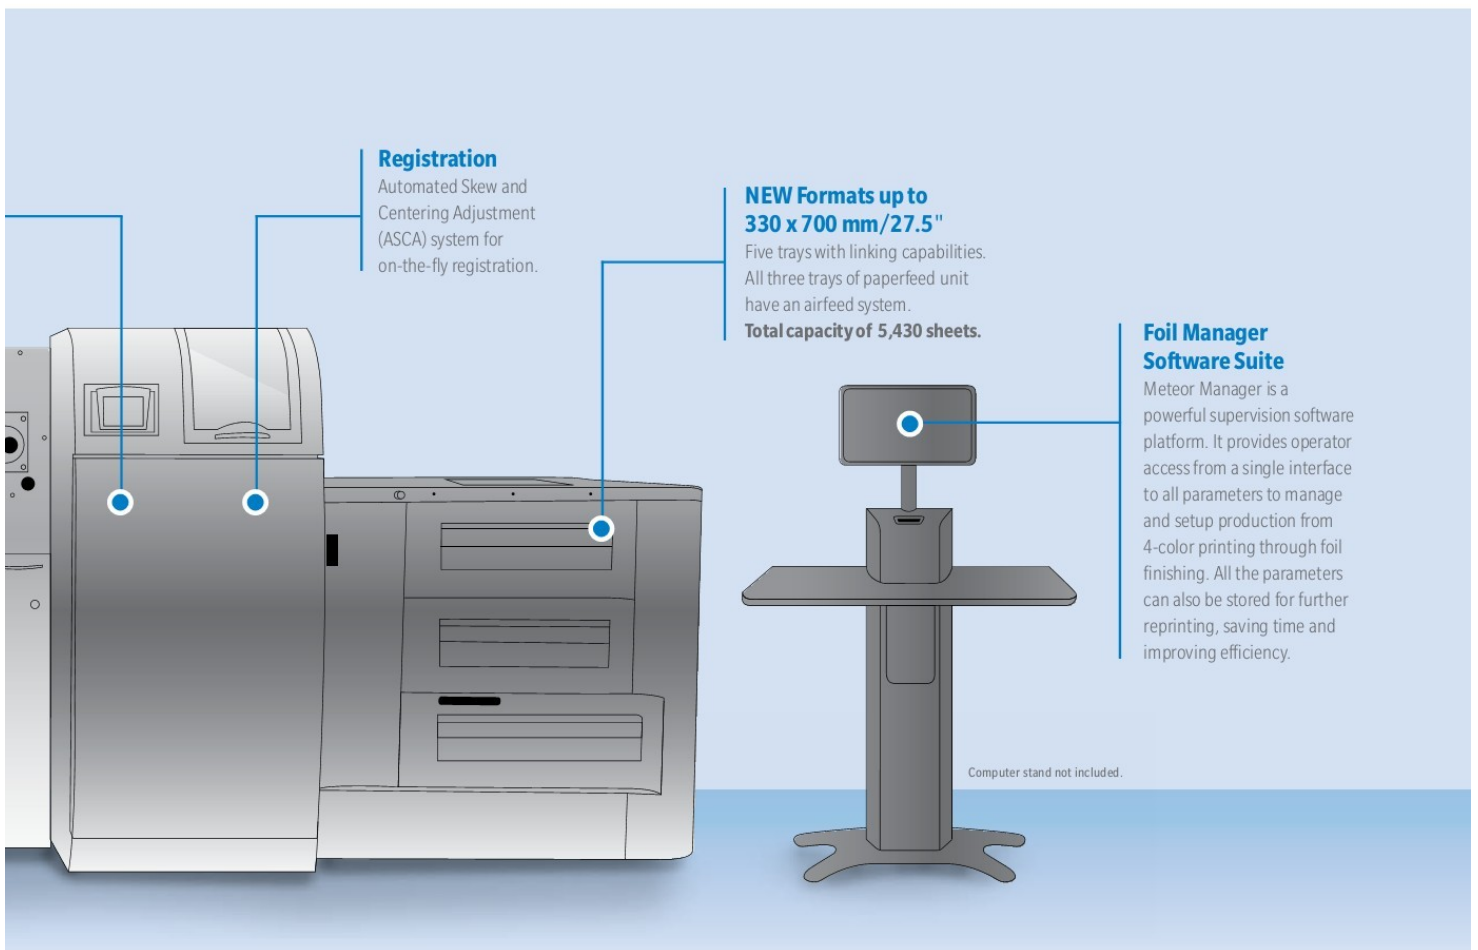

With no click charges involved, printers can also overprint the foil applied during the first pass with

another application of CMYK toner to create a limitless kaleidoscope of tints & hues – as well as precise spot coats to match colors generated from other environments. The light-reflecting qualities of metallic foil provide a powerful foundation for expanding the gamut of effects to a virtually unlimited color range.

### Foil Over Foil and Authentication Hologram Digital Printing® (AHDP) System

AHDP®, an MGI exclusive and patent system, produces on-demand holographic imprints with Meteor

Unlimited Colors presses, specially-formulated toner and foil films. The digital holographic effects offer customized security authentication options at a mere fraction of traditional costs. This powerful anti-counterfeiting method is now economically accessible without the need of expensive dies and lengthy tooling processes. AHDP also works in conjunction with variable data printing (VDP) to create unique document identification applications.

<b>Substrates</b>	The Hot Foil process is compatible with most of the substrates supported by the Meteor Digital Press (uncoated or coated paper, textured paper, envelopes, PVC, Teslin, etc.).
<b>Hot Foils</b>	Utilizes selected hot foils <sup>(3)</sup> available on the market. Integrated foil consumption system. Popular foil colors are supported such as gold, silver, blue, red, green and black.
<b>Rolls</b>	Hot foil are delivered on rolls. Standard roll is 320 mm width and 305 meters long, using a one inch core. Possibility to use smaller widths such as 100 mm and add them up on the same axis for laying up to 2 simultaneous colors. Standard 1" core, 3" core as an option.
<b>Foil Manager Software Suite</b>	Meteor Manager is a powerful supervision software platform. Within a single tool, it gives access to the operator to parameters to manage and setup the production from 4-color printing through foil finishing. All parameters can also be stored for further reprinting, saving time and improving efficiency.
